

WELCOME!

WE'RE GLAD YOU'RE HERE

Due to significant damaged caused by the September 2013 flood, Larimer County is planning to construct eight (8) new stream crossings on County Road 25E along Redstone Creek. The drainage improvements at these crossings consist of Precast Reinforced Concrete-Box Culverts ranging from 5 to 6 feet in height and 20 feet in width. Riprap will be placed on the upstream and downstream sides of the structures and the crossing roadways will be reconstructed and resurfaced.

As part of the project, Larimer County is planning to reconstruct a portion of County Road 25E known as the "Slide Area" where a small landslide has damaged the existing roadway. Approximately 1,100 feet of existing roadway will be realigned and reconstructed in this area.
